Application: Serial No. 09/775,927

**AMENDMENTS TO THE SPECIFICATION** 

Please amend paragraph 9 of the application-as-filed as follows:

FIG. 3 shows another quadrature modulator described in Patent Publication JP-A-10-4437, which

solves the above problem in the quadrature modulator of FIG. 2. The quadrature modulator of

FIG. 3 includes a local oscillator 402 for oscillating at a specified frequency, a first 1/2-

frequency-divider 310 for dividing the output frequency of the local oscillator 402 by a factor of

two, a second 1/2-frequency-divider 350 cascaded from the first 1/2-frequency-divider 310 for

dividing the output frequency thereof by a factor of two, a frequency mixer 320 for frequency

conversion using the output frequencies of second 1/2-frequency-divider 350 and the local

oscillator 402, a band-pass-filter (BPF) 330 for removing the image signal from the output of the

frequency mixer 320, a frequency-multiplier (doubler) 250 for doubling the output of the BPF

330, a third 1/2-frequency-divider 240 for dividing and phase-shifting the output from the BPF

330-frequency multiplier 250 to output a pair of orthogonal carrier waves having a phase

difference of 90 degrees therebetween, first and second multipliers 210 and 220 for modulating

the carrier waves with a baseband signal generated by a digital signal generator 101, and an adder

230 for adding the outputs of the first and second multipliers 210 and 220 to generate an output

digital carrier signal.
